Deepanshi Goyal

8595707712 | deepanshigoyal12345@gmail.com | linkedin.com/in/deepanshi-goyal-b049a7282 | github.com/Deeps-G

SUMMARY

AI and Data Science student with practical experience in ML models, RAG pipelines, and LLM workflows. Interested in agentic AI, multi-agent systems, and applying data-driven methods to solve real problems. Skilled in Python, SQL, and translating complex analysis into understandable insights.

EDUCATION

B.Tech, Computer Science (Data Science) **Cgpa: 7.87**

The NorthCap University *2023-2027*

EXPERIENCE

Machine Learning Intern June 2025– July 2025

IBM Edunet AICTE *Remote*

- Built employee salary prediction model using multiple ML algorithms and comparative analysis.
- Implemented stacking ensemble (Random Forest, Gradient Boosting, Logistic Regression) achieving improved accuracy.
- Performed data preprocessing, feature engineering, and evaluation using standard metrics.

Frontend Developer Intern June 2025–July 2025

Prodesk IT *Remote*

- Developed responsive frontend modules using HTML, CSS, and JavaScript.
- Enhanced UI usability and performance for assigned web pages.

PROJECTS

RAG-Based Q&A System (AI / NLP)

| *Python, Hugging Face, OpenAI API, Vector embeddings, Prompt Engineering*

- Built document parsing, chunking, vector store creation, and retrieval pipeline.
- Integrated transformer-based LLM for context-aware response generation.

Kisan Bazaar

- Designed system architecture for a smart agricultural marketplace.
- Proposed AI chatbot integration for soil analysis and price prediction.

Olympics Data Analysis

- Analyzed historical Summer Olympics dataset (1896–2024) using Python to identify long-term performance trends and statistical patterns across countries and sports.
- Performed data cleaning, exploratory data analysis, and visualization to interpret temporal trends in large-scale structured data.

Disease Prediction Model

- Developed a machine learning model to predict disease likelihood based on patient data using classification algorithms.
- Performed data preprocessing, feature selection, and model evaluation to improve predictive accuracy and support data-driven decision making.

Terrorist Data Analysis

- Conducted large-scale data analysis of global terrorist activity datasets using business intelligence and visualization techniques.
- Identified spatial and temporal patterns and presented structured analytical insights through data visualization dashboards.

TECHNICAL SKILLS

Languages: Java, Python, HTML/CSS, SQL , JavaScript, Git, VS Code
Machine Learning: Scikit-learn, Pandas, NumPy, Matplotlib, Feature Engineering, Model Selection, Evaluation Metrics
Deep Learning & AI: Neural Networks, PyTorch , Deep Learning fundamentals, Agentic AI, MAS
Generative AI / NLP: RAG (intuitive understanding & basic implementation), LLM concepts, Prompt Engineering, Hugging Face models & hosting
Visualization & BI: Tableau, KNIME
Developer Tools: Git, Docker, VS Code
